Trilink

Description

Trilink is a fast-paced local two-player 3D arena fighting game built around cooperative competition, readable combat, and expressive visual feedback. Two players fight in the same arena using separate controllers, while a color-based interaction system changes how players can collide and attack. Matching colors allow attacks to connect, while different colors allow players to phase through one another, creating a simple but strategic positioning mechanic. The game combines responsive movement, attack timing, combo chains, hitboxes, hit-stop, critical impacts, camera feedback, knockback, wall interactions, and stylized toon rendering to create a strong arcade game feel. The project was developed in Godot with a focus on real-time interaction, animation blending, combat readability, and polished audiovisual feedback. Trilink demonstrates how gameplay systems, animation, visual effects, and interactive design can be combined into a complete playable game experience.

List of Materials Used

- Godot Engine 4.x
- GDScript
- 3D character/mannequin assets and animation libraries
- AnimationTree and animation state-machine system
- Custom toon/cel-shading and transition shader effects
- 3D arena/environment assets and materials
- Custom combat, hitbox, hurtbox, knockback and combo systems
- Dual-controller local multiplayer input system
- Camera shake, hit-stop, impact effects and combat feedback
- UI assets and interface elements
- Windows build/export tools and multimedia recording tools

Project Category: Animation, Visual Effects, Gaming, Comics
